VILLAGE OF MOUNT PLEASANT

Campus Park

The Featherstone Difference

Featherstone was brought in by the Village of Mount Pleasant, Wisconsin for the complete redevelopment of a 43-acre park that would support both adult and child recreational activities, along with Special Event and multiple Sport Venues. Utilizing their design and construction knowledge, Featherstone worked with the Owner and Design team to further develop the project program and implementation strategies to deliver the project well within their budget.

Featherstone provided the cost and constructability information the team needed to make informed decisions regarding various elements, materials, and timelines. The construction phase began in earnest during an unseasonably heavy period of rainfall. The team had to battle the weather consistently to keep the project on track. Fortunately for the client, a critical decision had been made up front to provide significant drainage infrastructure to improve the utility of the ball fields throughout all types of bad weather.
